اعداد جروب فريق أصدقاء الكمبيوتر المنخصص

Put (√) or (X)

- 1- Problem is a situation requires a solution. ()
- 2- Problem is a the steps , activities and process to be done to reach an output or objective. ()
- 3- Problem is an object you want to reach using organized steps.()
- 4- Algorithm is a set of logically arranged steps to solve a problem ()
- 5- Flowchart is a diagram that uses standard graphical symbols to illustrate the sequence of steps required for solving a problem()
- 6- The first stage on solving a problem is preparing Algorithm. ()
- 7- The first stage on solving a problem is defining the problem. ()
- 8- Defining the problem means defining inputs, outputs and process. ()
- 9- Writing the program on computer using programming languages is the first step on problem solving. ()
- 10- Preparing algorithm is the second step on solving problem steps. ()
- 11- Program documentation means converting solving steps into flowchart. ()

- 12- Program documentation means converting flowchart into a programming language. ()
- 13- Testing program validity is the last step on solving a problem. ()
- 14- Program documentation is the last step on solving a problem. ()
- 15- Program documentation means that the program is without any mistakes. ()
- 16- Program testing means writing all the steps taken to solve the problem. ()
- 17- Flowchart it easy to understand the problem. ()
- 18- Flowcharts are drawn on computer only. ()
- 19- Flowcharts are useful to explain the program to others. ()
- 20- Flowcharts help on program documentation especially complicated programs. ()
- 21- Algorithm means an object request solving. ()
- 22- Algorithm helps on understanding the problem and converting it to a program. ()

- 23- Preparing a cup of tea is considered an example of a problem.()
- 24- Program documentation means writing all the steps taken to solve a problem. ()
- 25- On the problem defining step we write all the steps taken to solve the problem and the programmer's name. ()
- 26- We test the program validity after the documentation step. ()
- 27- Program testing means that the program is without any mistakes. ()
- 28- On the program testing step we define outputs, inputs and the process. ()
- 29- Preparing Algorithm is the first step on program solving steps. ()
- 30- Program designing is the third step on program solving steps.()
- 31- One of the Flowcharts disadvantages is that they are not useful to explain the program to others. ()
- 32- The left side of any equation must have one variable only. ()
- 33- You can use any geometric shape to act the solving steps of a flowchart. ()

- 34- You can draw a flowchart using standard graphical shapes. ()
- 35- We can use the shape  to put "Output" inside. ()
- 36- We can use the shape  to put "start" inside. ()
- 37- We can use the shape  on the start and end. ()
- 38- We can use the shape  when we have a question with more than one option. ()
- 39- We can use the shape  to represent the decision process and we write print inside it. ()
- 40- We can use the shape  to output data and we can write "print" inside it. ()
- 41- Flowchart starts with the start symbol  and ends with  ()
- 42- The rectangle symbol  is used to enter data. ()
- 43- The Rhombus symbol  is used to indicate a process of taking decision. ()
- 44- The rectangle symbol  is used to represent data processing. ()

- 45- The  on flowchart is used to a process of taking decision. ()
- 46- The Terminal symbol is used to represent input and output process . ()
- 47- The oval symbol  is used to represent data processing. ()
- 48- The   shapes are used to define the sequence of steps from up to down and from left to right. ()
- 49- The oval symbol  is used to represent entering data. ()
- 50- Flowchart uses standard graphical symbols to illustrate the sequence of steps required for solving a problem. ()
- 51- Variable is a store on the computer memory that contains a changeable value. ()
- 52- We use "Enter" to enter changeable values. ()
- 53- When we enter changeable values, we can use " Get – Read – Input " as they have the same meaning. ()
- 54- We use "Output" to output changeable values. ()

- 55- The "Output" expression is equal to "Print – Output" and have the same meaning. ()
- 56- We can write "Input" inside the shape . ()
- 57- The right side of any operation contains one variable only. ()
- 58- The right side of any operation contains an abstract value or an arithmetic operation. ()

Choose the correct answer from practice

- 1- is a goal that requires solution.
(Problem – Problem solving – Algorithm)
- 2- is group of a logically arranged procedures used to solve a problem.
(Problem solving – Problem – Algorithm)
- 3- are the steps, activities and process we should do to achieve our goals.
(Problem definition – Problem solving – Algorithm)
- 4- From the problem solving stages.....
(Problem – Problem definition – all the previous)

5- The first stage on problem solving stages is

(program testing – Problem definition – preparing the Algorithm)

6- The second stage on problem solving stages is

(program testing – Problem definition – preparing the Algorithm)

7- The Third stage on problem solving stages is

(program documentation – Problem definition – designing program)

8- The last stage on problem solving stages is

(program documentation – Problem definition – testing program validity)

9- Writing all the steps taken to solve the problem is called

(program documentation – preparing algorithm – Problem definition)

10- Converting flow chart into a programming language is called

(program designing – program documentation – Problem definition)

11- Converting problem solving steps into a flow chart is called

(program documentation – Algorithm – Problem definition)

12- is a diagram that uses standard graphical symbols

to illustrate the sequence of steps required for solving a problem.

(Problem solving – Flow chart – All the previous)

13- We can define inputs, outputs and process on the stage.

(Problem definition – Preparing Algorithm – program documentation)

14- is a situation that requires solution.

(Problem – Problem solving – Algorithm)

15- Flow chart makes it easy for the program to the problem and how to know what to do.

(read – understand – read and understand)

16- Flow charts use shapes to show data and problem solving steps.

(random – standard – explicative)

17- Making sure that the program is free of errors is called

(program testing – program designing – program documentation)

18- Using standard shapes to show problem solving is called

(Flowchart – problem Solving – Algorithm)

19- When we draw a flowchart we use

(standard geometric shapes – all geometric shapes – one geometric shape)

20- Problem solving has many expressions and the expression that represent arithmetic operation is

(Algorithm - Problem – program designing)

21- Problem solving has many expressions and the expression that represent preparing a cup of juice is

(Algorithm - Problem – flow chart)

22- On flow chart the shape used to represent taking decision is.....

( -  - )

23- On flow chart the shape used to represent processing is.....

( -  - )

24- On flow chart the shape used to represent inputs and outputs is...

( -  - )

25- On flow chart the shape used to represent start and end is.....

( -  - )

26- The shape that shows the sequence of steps is the.....

(rhombus – oval – flow lines)

27- Flow chart begin with the start symbol  and ends with the end symbol

( -  - )

28- A , B , C are called

(variables – equations – arithmetic operations)

29- Is a store on the computer memory is contains changeable values.

(Constants – Variables – Algorithm)

30- The word that is equal to "Get" and has the same meaning is

(Print – Read – Start)

31- The word that is equal to "Output" and has the same meaning is

(Read - End – Print)

32- The word that is equal to "Enter" and has the same meaning is

(Read - Output – Print)

33- The formula $C=A+B$ is put inside

( -  - )

34- The formula "Print Result" is put inside

( -  - )

35- On the formula $C=A+B$

("C" is a store on memory – the values of "A+B" are stored on "C" – all the previous)

36- The right side of any equation contains

(one variable only – more than one variable – nothing of the previous)

37- On flow chart is used to represent input values.

(Start – Print – Input)

38- On flow chart is used to represent output values.

(Print – output – nothing of the previous)

39- On flow chart is used to output results.

(Start – Input – Output)

40- On flow chart is used to output results.

(input – Read – nothing of the previous)

41- The side of any equation has one variable and contains the sum.

(right – left – all the previous)

42- Which symbol is incorrect ?

43- shows the sequence of steps.

(Flow Line – Terminal – Process)

44- When you give a premier value to a variable use theshape

45- The arithmetic operations occurs on the stage

(Problem solving – Algorithm – Problem definition)

46- Wearing the suitable shoes, preparing your traveling

requirements and training on climbing is

(Problem solving – Algorithm – Problem)

47- On flow chat we use the symbolwhen we have more than option.

(sums – Branching – Loops)

48- Study this flow chart well, then choose the correct answer:

1- Fill in the blankson the flow chart

(Start – End – Flowlines)

2- The rectangle represents a.....

(End – Print – Input)

3- On the opposite flow, chart The expression equal to output is.....

(outputs – inputs – process)

Model exam 1**Put (√) or (X)**

- 1- A problem is a situation that requires solution. ()
 - 2- The terminal shape is used to define inputs and outputs. ()
 - 3- You can use any geometric shape to react the solution steps. ()
 - 4- The steps of the problem solving are written on the "Problem definition" step. ()
 - 5- Program documentation means writing all the steps taken to solve the problem. ()
-

Choose the correct answer from practice

- 1- is used to define the sequence of the steps.
(Rectangle – Ellipse – Flow lines)
- 2- is a store on the computer memory and contains variable values.
(process – Variable – Values)
- 3- is used to define outputting values on the flowchart.
(Enter – Output – All the previous)
- 4- Flow chart uses graphical symbols to illustrate the sequence steps required to solve the problem.
(random – standard – graphical)
- 5- A,B are considered..... on preparing a flow chart .
(variables – stores on the computer memory – all the previous)

Model exam 2

Choose the correct answer from practice

- 1- is the steps to be done to reach an output .
(Problem – Problem Solving – Program testing)
- 2- is a set of arranged steps to be done to reach an output .
(Problem – Problem Solving – Algorithm)
- 3- is a situation that requires solution.
(Problem – Problem Solving – Algorithm)
- 4- is the last step on problem solving steps .
(Program documentation – Program designing – Program testing)
- 5- The steps of solving a problem are presented as a diagram on
(problem solving – Program testing – flow chart)
- 6- Flow charts contains a question with 2 answers called
(Loop – Branching – Process)
- 7- Look at the opposite flow chart then choose the correct answer:

A. The looped code is.....

(Start – Print M – End)

B. $M=M+1$ means the increased value as.....

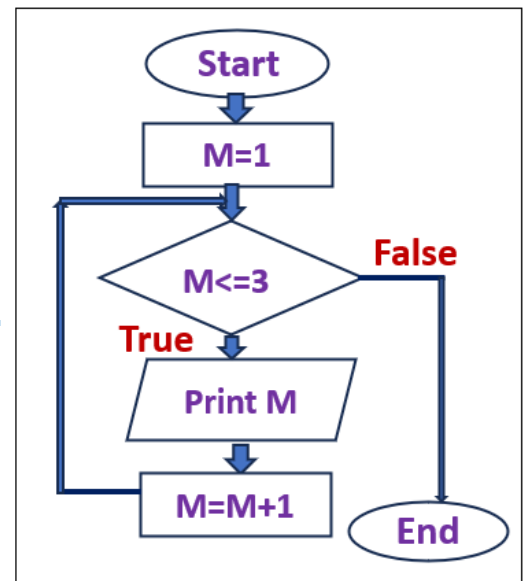

(1 – 3 – 4)

C. The shape defining decision is

( –  – )

D. The final value of M is

(6 – 2 – 4)

- 58- The right side of any operation contains an abstract value or an arithmetic operation. (✓)

Choose the correct answer from practice

- 1- is a goal that requires solution.

(Problem – Problem solving – Algorithm)

2- is group of a logically arranged procedures used to solve a problem.

(Problem solving – Problem – **Algorithm**)

3- are the steps, activities and process we should do to achieve our goals.

(Problem definition – **Problem solving** – Algorithm)

4- From the problem solving stages.....

(Problem – **Problem definition** – all the previous)

5- The first stage on problem solving stages is

(program testing – **Problem definition** – preparing the Algorithm)

6- The second stage on problem solving stages is

(program testing – Problem definition – **preparing the Algorithm**)

7- The Third stage on problem solving stages is

(program documentation – Problem definition – **designing program**)

8- The last stage on problem solving stages is

(**program documentation** – Problem definition – testing program validity)

9- Writing all the steps taken to solve the problem is called

(**program documentation** – preparing algorithm – Problem definition)

10- Converting flow chart into a programing language is called

(**program designing** – program documentation – Problem definition)

11- is a diagram that uses standard graphical symbols to illustrate the sequence of steps required for solving a problem.

(Problem solving – **Flow chart** – All the previous)

12- We can define inputs, outputs and process on the stage.

(**Problem definition** – Preparing Algorithm – program documentation)

13- is a situation that requires solution.

(**Problem** – Problem solving – Algorithm)

14- Flow chart makes it easy for the program to the problem and how to know what to do.

(read – understand – **read and understand**)

15- Flow charts use shapes to show data and problem solving steps.

(random – **standard** – explicative)

16- Making sure that the program is free of errors is called

(**program testing** – program designing – program documentation)

17- Using standard shapes to show problem solving is called

(**Flowchart** – problem Solving – Algorithm)

18- When we draw a flowchart we use

(**standard geometric shapes** – all geometric shapes – one geometric shape)

19- Problem solving has many expressions and the expression that represent arithmetic operation is

(**Algorithm** - Problem – program designing)

20- Problem solving has many expressions and the expression that represent preparing a cup of juice is

(Algorithm - **Problem** – flow chart)

21- On flow chart the shape used to represent taking decision is.....

( -  - )

22- On flow chart the shape used to represent processing is.....

( -  - )

23- On flow chart the shape used to represent inputs and outputs is...

( -  - )

24- On flow chart the shape used to represent start and end is.....

( -  - )

25- The shape that shows the sequence of steps is the.....

(rhombus – oval – **flow lines**)

26- Flow chart begin with the start symbol  and ends with the end symbol

( –  – )

27- A , B , C are called

(**variables** – equations – arithmetic operations)

28- Is a store on the computer memory is contains changeable values.

(Constants – **Variables** – Algorithm)

29- The word that is equal to "Get" and has the same meaning is

(Print – **Read** – Start)

30- The word that is equal to "Output" and has the same meaning is

(Read - End – **Print**)

31- The word that is equal to "Enter" and has the same meaning is

(**Read** - Output – Print)

32- The formula $C=A+B$ is put inside

( –  – )

33- The formula "Print Result" is put inside

( –  – )

34- On the formula $C=A+B$

("C" is a store on memory – the values of "A+B" are stored on "C" – **all the previous**)

35- The right side of any equation contains

(one variable only – **more than one variable** – nothing of the previous)

36- On flow chart is used to represent input values.

(Start – Print – **Input**)

37- On flow chart is used to represent input values.

(Print – output – **nothing of the previous**)

38- On flow chart is used to output results.

(Start – Input – **Output**)

39- On flow chart is used to output results.

(input – Read – **nothing of the previous**)

40- The side of any equation has one variable and
contains the sum.

(right – **left** – all the previous)

41- Which symbol is incorrect ?

42- shows the sequence of steps.

(**Flow Line** – Terminal – Process)

43- When you give a premier value to a variable use theshape

44- On flow chart we use the symbolwhen we have more than option.

(sums – **Branching** – Loops)

45- Study this flow chart well, then choose the correct answer:

4- Fill in the blankson the flow chart

(**Start** – End – Flowlines)

5- The rectangle represents a.....

(outputs – inputs – **process**)

6- On the opposite flow, chart The expression equal to output is.....

(End – **Print** – Input)

Model exam 1

Q	Put (√) or (X)	Q	Choose the correct answer from practice
1	√	1	Flow Lines
2	X	2	Variable
3	X	3	Output
4	X	4	Standard
5	X	5	All the previous

Model exam 2

Q	Choose the correct answer from practice		
1	Problem solving	6	Branching
2	Algorithm	A	Print M
3	Problem	B	1
4	Program documentation	C	
5	Flow charts	D	4
